Model Nos. and pricing: see Price List

## Vitocell 300-V, EVIB

Single coil, indirect-fired domestic hot water (DHW) storage tank  
42 USG (160 L) capacity

## Vitocell 300-V, EVIB

Single coil, indirect-fired domestic hot water (DHW) storage tank  
53 USG (200 L) capacity

## Vitocell 300-V, EVIB

Single coil, indirect-fired domestic hot water (DHW) storage tank  
79 USG (300 L) capacity

## Vitocell 300-V, EVIB

Single coil, indirect-fired domestic hot water (DHW) storage tank  
119 USG (450 L) capacity

## VITOCCELL® 300-V

Product may not be exactly as shown

Vertical indirect-fired domestic hot water (DHW) storage tank of high-grade stainless steel with one coil.

**CAUTION**  
This tank version is not suitable for steam heating applications.

## Benefits

Hygienic, convenient and economical Domestic hot water (DHW) heating with DHW tanks made from stainless steel – vertical version

### Benefits at a glance:

- Corrosion-resistant tank of high-grade stainless steel offers a long service life.
- Fully hygienic due to high quality homogeneous stainless steel surfaces.
- The high-alloy material is immune to cracking or peeling. The tank stays hygienic and requires only minimum service.
- Does not require a consumable anode for corrosion protection.
- The entire water content is heated by a 1 $\frac{3}{8}$  in. (35 mm) pipe diameter (OD) stainless steel heat exchanger surface which extends to the bottom of the tank.
- The positioning of the tubular heat exchanger coil further ensures that 82% to 97% of the tank volume can be drawn at constant water temperature.
- The stainless steel heat exchanger coil is self-venting towards the top and self-draining towards the bottom, therefore not susceptible to reduced heat transfer due to air lock or deposits.
- Universally suitable – for applications requiring larger quantities of hot water, multiple vertical tanks can be combined via headers to form tank batteries.
- Standby losses minimized by highly effective HCFC free foam.  
119 USG (450 L) version comes equipped with removable soft PET insulation for easier handling.
- Easy transport into mechanical room due to low weight and compact construction.
- Certified to CSA Low Lead Content Certification Program; including US Safe Drinking Water Act, NSF/ANSI 372 as well as other applicable US State requirements.

# Cross Section

- Ⓐ Inspection and cleaning opening
- Ⓑ Stainless steel cylinder
- Ⓒ Highly effective all-round thermal insulation
- Ⓓ Indirect coil made from stainless steel

## Technical Data 300-V EVIB-42

For domestic hot water heating applications which utilize modulating and low temperature hot water heating boilers.

Suitable for heating systems with:

- max. working pressure on heat exchanger side up to 220 psig at 392°F (200°C)
- max. working pressure on DHW water side of up to 150 psig at 210°F (99°C)

- RT DHW Recirculation Tapping
- TPV Temperature and Pressure relief Valve
- TS Clamping system for fastening Temperature Sensors to the tank shell. Fastening channels for three temperature sensors per clamping system.

\*1 For solar heating systems Viessmann recommends placement of the DHW tank temperature sensor in the heating water return (BWR). This requires a brass elbow with sensor well (see price list, Vitocell 300 accessory).

DHW tank temperature sensor in solar heating applications 119 USG (450 L).

**Legend**

- (A) DHW tank temperature sensor for solar application (included with solar control unit)
- (B) Brass elbow with sensor well
- (C) Solar collector return connection.

## Water Flow

### Domestic hot water draw rate

Storage tank contents heated to 140°F (60°C), boiler not reheating.

Model	300-V EVIB				
	USG (L)	42 (160)	53 (200)	79 (300)	119 (450)
Domestic hot water draw rate	GPM (L/min)	2.6 (10)	2.6 (10)	4.0 (15)	4.0 (15)
Domestic hot water draw water with t = 140°F (60°C)(constant)	USG (L)	35 (133)	41 (155)	63 (240)	103 (390)
tank volume	%	83	77.5	80	87

### Heat-up time

The stated heating times are achieved when the maximum recovery rate of the domestic hot water tank is made available at the respective supply temperature and with a domestic hot water rise from 50°F to 140°F (10°C to 60°C).

Model	300-V EVIB				
	Storage capacity USG (L)	42 (160)	53 (200)	79 (300)	119 (450)
Heating water supply temperature	Heat-up time (minutes)				
194°F (90°C)	17	19	21	25	
176°F (80°C)	20	24	30	33	
158°F (70°C)	30	37	40	46	

### Pressure drop on the heating water side

#### Legend

- (A) 42 and 53 USG (160 and 200 L) capacity
- (B) 79 USG (300 L) capacity
- (C) 119 USG (450 L) capacity

### Pressure drop on the DHW side

#### Legend

- (A) 42 and 53 USG (160 and 200 L) capacity
- (B) 79 USG (300 L) capacity
- (C) 119 USG (450 L) capacity

## Standard Equipment

### Vitocell 300-V, EVIB 42 USG (160 L) capacity

DHW tank made from stainless steel.

- Integral welded sensor well for tank temperature sensor/temperature controller (internal diameter 7 mm)
  - Temperature and pressure relief valve
  - Installation fittings
  - Technical literature set
  - Adjustable feet
  - Fitted thermal insulation
- Color of the epoxy-coated sheet steel casing:  
Vitopearlwhite.

### Vitocell 300-V, EVIB 53 USG (200 L) capacity

DHW tank made from stainless steel.

- Integral welded sensor well for tank temperature sensor/temperature controller (internal diameter 7 mm)
  - Temperature and pressure relief valve
  - Installation fittings
  - Technical literature set
  - Adjustable feet
  - Fitted thermal insulation
- Color of the epoxy-coated sheet steel casing:  
Vitopearlwhite.
- Threaded elbow with solar sensor well (optional)  
[well internal dia. ¼ in. (6.5 mm)]

### Vitocell 300-V, EVIB 79 USG (300 L) capacity

DHW tank made from stainless steel.

- Temperature and pressure relief valve
  - Installation fittings
  - Technical literature set
  - Adjustable feet
  - Fitted thermal insulation
- Color of the epoxy-coated sheet steel casing:  
Vitopearlwhite.
- Threaded elbow with solar sensor well (optional)  
[well internal dia. ¼ in. (6.5 mm)]

### Vitocell 300-V, EVIB 119 USG (450 L) capacity

DHW tank made from stainless steel.

- One clamping system with three fastening channels for attaching temperature sensors to the tank shell.
  - Temperature and pressure relief valve
  - Installation fittings
  - Technical literature set
  - Adjustable feet
  - Separate carton with removable thermal insulation
- Color of the plastic-coated thermal insulation:  
Vitosilver
- Threaded elbow with solar sensor well (optional)  
[well internal dia. ¼ in. (6.5 mm)]

## Multiple Tank Installation

### Technical data

The DHW tanks may be combined into batteries consisting of 2 tanks [79 USG (300 L)] tanks or 3 [119 USG (450 L)] tanks. Tank batteries consisting of more than 3 tanks can be installed by creating up to 4 batteries, each consisting of 2 tanks. The heating contractor is responsible to ensure proper piping on both the primary and secondary circuits.

		GPH (L/h)	264 (1002)	304 (1158)	456 (1737)
<b>Supply flow rate</b> for the recovery rates stated	GPM (m <sup>3</sup> /h)	26.4 (6)	44.0 (10)	66.0 (15)	
<b>Standby heat loss *2</b>	BTU/h (°F/h)	302 (0.5)	574 (0.3)	861 (0.3)	
<b>Heat exchanger surface area</b>	ft. <sup>2</sup> (m <sup>2</sup> )	32 (3.0)	36.6 (3.4)	54.9 (5.1)	

\*1 When planning for the recovery rate as stated or calculated, allow for the corresponding circulation pump. The stated recovery rate is only achieved when the rated output of the boiler is equal to or greater than that stated under "Recovery rates".

\*2 Measured values are based on a room temperature of 68°F (20°C) and a domestic hot water temperature of 149°F (65°C) and can vary by ±5%.

For domestic hot water heating applications which utilize modulating and low temperature hot water heating boilers

Examples of multiple tank installations (shown). All fittings including manifolds are field supplied.

Model	300-V EVIB			
Storage tank capacity	79 USG (300 L)	119 USG (450 L)		
<b># of storage tanks</b>	2	2	3	
<b>Common header size boiler supply / return</b>	in. (mm)	2 (51)	2 (51)	2 (51)
<b>Common header size domestic hot / cold water</b>	in. (mm)	1¼ (32)	1¼ (32)	1½ (38)
<b>Dimensions with insulation</b>	in. (mm)	59 (1495)	74¾ (1900)	116¾ (2968)
<b>Overall width *1</b>				

\*1 Overall width includes 2" clearance space between the tanks.

**Quick recovery (over 10-minute period)**

Domestic hot water rise from 50°F to 113°F (10°C to 45°C)

Heating water supply temperature				
194°F (90°C)	USG/10 min (L/10 min)	186 (704)	292 (1104)	438 (1656)
176°F (80°C)	USG/10 min (L/10 min)	172 (649)	283 (1072)	425 (1608)
158°F (70°C)	USG/10 min (L/10 min)	164 (620)	274 (1038)	411 (1557)

**Max. domestic hot water draw rate (over 10-minute period)**

Domestic hot water rise from 50°F to 113°F (10°C to 45°C)

Heating water supply temperature				
194°F (90°C)	GPM (L/min)	18.6 (70.4)	19.1 (110.4)	43.7 (165.6)
176°F (80°C)	GPM (L/min)	17.0 (64.9)	28.3 (107.2)	42.4 (160.8)
158°F (70°C)	GPM (L/min)	16.3 (62.0)	27.4 (103.8)	41.1 (155.7)

# System Design Guidelines

## Domestic hot water connections

**Legend**

- (A) Domestic hot water (DHW) supply
- (B) DHW recirculation line
- (C) DHW recirculation pump with integrated check valve
- (D) Discharge pipe
- (E) Pressure and temperature relief valve
- (F) Shut-off valves
- (G) Drain
- (H) Domestic cold water (DCW) supply lines
- (I) Backflow preventer
- (J) DCW inlet
- (K) Precharged expansion tank  
(required where backflow preventer is installed;  
check local plumbing codes and requirements)
- (L) Thermostatic mixing valve/anti-scald valve
- (P) Boiler supply
- (Q) Boiler return

**IMPORTANT**

**This is a simplified conceptual drawing only!  
Piping and necessary componentry must be field  
verified. Proper installation and functionality in the  
field is the responsibility of the heating contractor.**

**System Design Guidelines** *(continued)*

**Boiler hot water connections (single coil)**

**Note:** See pages 4, 5, 6 and 7 for technical information.

**Legend**

- (A) Vitocell 300
- (B) Boiler \*
- (C) Domestic Cold Water (DCW)
- (D) Domestic Hot Water (DHW)
- (E) Boiler supply
- (F) Boiler return

\*  Refer to your specific boiler installation manual for specific boiler connection details.

## Additional System Information

### Sensors

The sensor clamps are to be used for control sensors to ensure maximum operational safety.

For solar heating systems, Viessmann recommends placement of the DHW tank temperature sensor in the solar collector return. This requires a brass elbow with the sensor well (see page 9).

**! WARNING**

To ensure optimum, safe operation, the stainless steel well must be used. The well diameter is large enough to accommodate a wide variety of sensing bulbs. Always use spring clip to ensure proper contact of capillary bulb against the stainless steel well for proper sensing/heat transfer!

### Heating water supply temperature over 230°F (110°C)

For these operating conditions, an approved high limit must be installed to limit the domestic hot water temperature to 203°F (95°C) in the tank.

### Temperature and pressure relief valve

A 150 psi temperature and pressure relief valve (T&P relief valve) is supplied with the tank. The heating contractor must install the valve on each tank in a method meeting code requirements. If local codes require a different relief valve, substitute the manufacturer's supplied valve. Maximum operating pressure is 150 psig.

The T&P relief valve supplied with the tank is tested under ANSI Z21.22 Code for Relief Valves and Automatic Gas Shut-off Devices for Hot Water Supply Systems.

T&P Valve	150 psig
ASME pressure steam rating	see ratings marked on T&P valve
CSA temperature steam rating	205 MBH*
Relief temperature	210°F (99°C)
Inlet thread	¾ in. male
Outlet thread	¾ in. female

\* 105 MBH for 42 USG (160 L)

### Tempering valve

Ensure that temperature tempering valve(s) is installed if the domestic hot water storage tank temperature exceeds 140°F (60°C) to protect from scalding. Consult plumbing codes and authorities for local requirements.

### Installation of additional high limit temperature device(s)

**! WARNING**

In a multiple-tank installation, it is recommended that an additional high limit temperature device be installed in the common domestic hot water supply header to the system. This safety device should be wired in series to the operating control of the tank battery. The setting on this additional high limit temperature device should be approximately 9°F (5°C) higher than the operating high limit.

### Recirculation tapping

The recirculation tapping is on a separate tapping (see pages 8 and 9). Cap this opening if the tank is not installed with recirculation.

### Backflow preventers

Where backflow preventers are required, a domestic water expansion tank installation is recommended in the cold water inlet piping before the cold water enters the Vitocell. For the backflow device, observe local plumbing codes and regulations.

### Warranty consideration

Viessmann DHW tanks require that the water heated should be of drinking water quality and that any water treatment equipment in use must function correctly.

If the product has been improperly installed or misapplied by the installer, contractor or final user, Viessmann accepts no responsibility for damage howsoever caused and reserves the right to withdraw the product warranty. In order to qualify for product warranty, strict adherence to the installation and service manuals must be observed.

In the event that components not approved by Viessmann are utilized, Viessmann reserves the right to withdraw all expressed or implied warranties without written notice.

The water to be heated with the Vitocell must be drinking (potable) water quality. If the tank is used to heat other media, the warranty will be null and void. Damage resulting from excessive pressure or temperature is clearly not the responsibility of Viessmann.

The amount of chloride and sulfate acceptable to the tank is limited. In areas where high concentrations of chloride and sulfate are present in drinking water, please consult Viessmann for directions.

For full warranty details, please read the product warranty sheet.
