New CombiPLUS** Kit Brings On-demand DHW Capability to Vitodens 100 Space Heating Boiler**

Equipped with expanded control logic, the popular Vitodens 100 condensing space heating boiler can now deliver on-demand domestic hot water (DHW) with the new Combi**PLUS** Kit. This compact, economical solution greatly expands the range of possible applications for the Vitodens 100 – a boiler already known for its versatility, efficiency and reliability.

Slightly bigger than a large shoe box (9.8" x 17" x 8.7"), the optional Combi**PLUS** Kit can be mounted underneath or beside the boiler with minimal piping and electrical connections, as part of a new boiler installation or as a later addition to a compatible Vitodens 100.

Generating up to 3.6 GPM of reliable on-demand DHW, the Combi**PLUS** Kit eliminates the need for a DHW storage tank in many lower-load applications such as apartments, condos, cottages, single-family homes or installs where space is at a premium. The compact, virtually silent unit integrates a stainless steel plate-type heat exchanger, built-in pressure bypass, three-speed DHW/space heating pump and three-way diverting valve. Built-in temperature and flow sensors ensure consistent supply, and DHW heating is managed through the boiler's on-board control.

The Combi**PLUS** Kit has received Low Lead Content certification by CSA International when installed in combination with the Vitodens 100. The certification indicates compliance with the stringent requirements of the American National Standard NSF/ANSI 372, California Health and Safety Code 116875 and similar standards in Vermont and Maryland.

Combi**PLUS** Kits and new Combi**PLUS**-compatible Vitodens 100 boilers are now available through Viessmann Wholesale Partners across the U.S. and Canada. Visit www.viessmann.us or www.viessmann.ca for more information.

The Viessmann Group is one of the leading international manufacturers of heating systems. Founded in 1917, the family business maintains a staff of approximately 9,400 employees and generates roughly 1.7 billion Euro in annual group turnover. Viessmann is an internationally oriented company with 23 production and project management divisions in 11 countries, business activities in 74 countries, 32 subsidiaries and 120 sales offices around the world. Fifty-six percent of sales are derived from export activities. For additional information, please contact the North American Head Office in Waterloo, Ontario, Canada.
